Tvashtri Technologies

TVASHTRI TECHNOLOGIES PRIVATE LIMITED was founded two years ago on 27 February 2015. It is registered in Bangalore Registrar of companies, and belongs to Private Company class. From our data is known that its status is Active, and its identification code: U72200KA2015PTC079045. Company's category is Company limited by shares, with Sub. Category: Indian Non-Government Company. Its type - Unlisted. Tvashtri Technologies's industry: Software publishing, consultancy and supply

Two years ago TVASHTRI TECHNOLOGIES was marked by Bangalore Registrar of companies. It belongs to entity of Company limited by shares, with authorized capital 200,000 rupee and paid up capital – 100,000 rupee. Assigned registration number is: 79045, with Indian Non-Government Company category. Sadly we have no data about date of last annual general meeting at present time. Sadly all date of balance sheet info is absent in our base. The company type is Unlisted Public Company with three owners/directors: Singachar Chinnaswamy, Rajarathnamma Revannachar, Ravikumar Chinnaswamy

Software publishing, consultancy and supply [Software publishing includes production, supply and documentation of ready-made (non-customized) software, operating systems software, business & other applications software, computer games software for all platforms. Consultancy includes providing the best solution in the form of

ORACLE DATABASE MOBILE SERVER

Oracle Database Mobile Server is the best way to securely connect embedded devices and mobile applications to Oracle Database. The core of the product is an advanced synchronization engine that is capable of keeping with a backend Oracle Database system. The sync engine is robust and resilient. It has been designed to function efficiently over a solid network, but still be reliable over an unstable network connection. If connectivity is lost, sync will stop, and pick up where it left off once connectivity returns. It is also secure; encryption is available for both data transport and storage on the remote client.

Database Mobile Server Architecture

E- BALL TECHNOLOGY

A new concept of pc is coming now that is E-Ball Concept pc. The E-Ball concept pc is a sphere shaped computer which is the smallest design among all the laptops and desktops. This computer has all the feature like a traditional computer, elements like keyboard or mouse., dvd, large screen display. E Ball is designed that pc is be placed on two stands, opens by pressing and holding the two buttons located on each side of the E-Ball pc , this pc is the latest concept technology

As years passes, the computer size is becoming smaller. This ball is known as E-Ball and its design is given by Apostol Tnokovski. He was trying to create the smallest PC in the world when he came across this idea.It is shaped like a sphere because in Tnokovski's opinion this is the best shape in nature and it draws everybody's attention.

you'll see the pop-out laser mouse, a pico projector inside that illuminates either the wall or a sheet of paper for a screen, and that laser keyboard that would almost certainly be a clumsy input device. Fix that, and find a motherboard that'll fit inside this palm-sized baby, and Apostol might be onto something here.E-Ball will feature a dual core

E-BALL is working on virtual keyboard

VIRTUAL KEYBOARD is another example of today's computer, smaller and faster. It uses sensor technology and artificial intelligence to let users work on any surface. If it were a keyboard, a virtual keyboard is a small Java application that lets you easily create multilingual text content. Virtual keyboard is being small, handy, and well designed and easy to apply, turning into a perfect solution for cross-platform multilingual text input built in languages.

MAYA

maya (formerly Amaya World) was a free and open source WYSIWYG web authoring tool with browsing abilities. It was created by a structured editor project at the INRIA, a French national research institution, and later adopted by the World Wide Web Consortium (W3C) as their testbed for web standards; a role it took over from the Arena web browser. Since the last release in January 2012, INRIA and the W3C have stopped supporting the project and active development has ceased.

Amaya has relatively low system requirements, even in comparison with other web browsers from the era of its active development period, so it has been considered a "lightweight" browser.

History

This section needs expansion. You can help by adding to it. (June 2010) Ramzi Guetari joined the team in October 1996. Daniel Veillard was responsible for the integration of CSS in Amaya and maintained the Linux version.

Features

Access keys
Caret navigation
Page zooming
Password management
Spell checking
Transport protocols
Support for CSS, MathML, SVG, RDF and Xpointer
Displays free and open image formats such as PNG and SVG, as well as a subset of SVG animation.

Codebase timeline

Amaya originated as a direct descendant of the Grif WYSIWYG editor created by Vincent Quint and Irène Vatton at INRIA in the early 1980s, and of the HTML editor Symposia, itself based on Grif, both developed and sold by French software company Grif SA.
