The Future of Robotics. Robotic engineers are designing the next generation of robots to look, feel and act more human, to make it easier for us to warm up to a cold machine. Realistic looking hair and skin with embedded sensors will allow robots to react naturally in their environment.

Robotic engineers are designing the next generation of robots to look, feel and act more human. To make it easier for us to warm up to a cold machine.

Realistic looking hair and skin with embedded sensors will allow robots to react naturally in their environment. For example, a robot that senses your touch on the shoulder and turns to greet you.

THERE WERE FOUR TYPES:

1. Robotic Insects
2. Robotic Prosthetics
3. Exoskeletons
4. Robotic Competitions

Robotic Insects:

Insects have come up with many interesting solutions for the problems that future robots will have to deal with like cooperation, specialized movement and adapting to changing environments. Robotic engineers are incorporating examples found in nature into their designs

Robotic Prosthetics:

A prosthesis or prosthetic implant is a robotic device that restores the normal functions of a body part, lost through trauma, disease, or a condition present at birth? Prosthetics are controlled by neural activity in the brain to restore motor function to where it feels entirely.

Exoskeletons:

Wearable bionic suits are being developed for the military to allow soldiers to carry heavier loads and to conserve energy.

Other uses for exoskeletons are assisting rescue workers move heavy objects and bionics for motor-impaired patients.

Robotic Competitions:

The ultimate goal of the RoboCup project is to develop a team of fully autonomous humanoid robots that can win against the human world champion team in soccer by the year 2050.

The FIRST Robotics Competition challenges teams of young people and their mentors to solve a common problem in a six-week timeframe using a standard "kit of parts" and a common set of rules..

FUTURE
WILL RULE
BY
ROBO

(CSE-B)

A Leading technology know as
“Plam Vein Authentication”

can be easly intergreted to customer products

What is Palm Authentication ?

Palm vein authentication is a vein feature authentication technology that uses palm veins as the biometric feature. Palm vein patterns are normally captured using near-infrared light via either the reflection or the transmission methods.

An individual first rests his wrist on some devices, the middle of his fingers, on the sensors supports such that the palm is held centimeters above the devices scanner, which flashes a near infrared ray on the palm.

Who Invented Palm Vein technology ?

Joe Rice

Joe Rice, An automation controls engineer at Kodak's Annesley Factory, invented vein pattern recognition in the early 1980s in response to his bankcards and identity being stolen.

How does Palm vein technology work?

Palm vein scan is a biometric that works by using infrared light to map the unique vein structure of your palm, capturing over 5 million data points. The palm vein scanner then converts these data points into a unique encrypted code that becomes your biometric ID.

Palm Vein pattern recognition

The haemoglobin in your blood contains oxygen when it is transported from your lungs to the tissues in your body by your arteries. By the time the blood flows back to your heart via different arteries this oxygen has been released.

Vein pattern recognition uses this difference between deoxidised and oxygenated haemoglobin.

Retina vein pattern recognition

The human retina is a thin layer of tissue at the back of the eye. Because of the complex structure of capillaries that supply blood to the retina, every retina is unique. Retina vein pattern recognition involves scanning the retina by shining (non-infrared) light through the eyeball. As the blood vessels in the retina absorb this light, the vein pattern can be discerned and stored as an image. Retina vein pattern recognition is becoming less popular, mainly because it is not a user-friendly technique.

Finger vein pattern recognition

Finger vein pattern recognition is based on the same principle as palm vein pattern recognition. Illuminating the vein pattern in the fingers using near-infrared light makes it possible to discern this pattern, thanks to the deoxidised haemoglobin.

In the case of a finger scan the surface area you are dealing with is much smaller, however. That means, on the one hand, that this is a more compact technique than palm vein pattern recognition, as the scanner is simply a smaller device.

- **D.Renuka Devi, 19A81A05K1**

VIRTUAL REALITY

Virtual reality is an artificial environment that is created with software and presented to the user in such a way that the user suspends belief and accepts it as a real environment. On a computer, virtual reality is primarily experienced through two of the five senses: sight and sound.

Virtual reality can be divided into:

- The simulation of a real environment for training and education.
- The development of an imagined environment for a game or interactive story.

Who invented VIRTUAL REALITY?

Joe Bardi is Marxent's former Communications Director. Prior to joining Marxent, he spent a decade working as Managing Editor and movie critic at Tampa's Creative Loafing newspaper, then handled digital content and strategy for ABC 7 WWSB.

How is virtual reality achieved?

Although we talk about a few historical early forms of virtual reality elsewhere on the site, today virtual reality is usually implemented using computer technology. There are a range of systems that are used for this purpose, such as headsets, omni-directional treadmills and special gloves. These are used to actually stimulate our senses together in order to create the illusion of reality.

Why have virtual reality?

Immersive films and video games are good examples. The entertainment industry is after all a multi-billion dollar one and consumers are always keen on novelty. Virtual reality has many other, more serious, applications as well.

ADVANTAGES:-

- Virtual reality creates a realistic world.
- It enables user to explore places.
- Virtual Reality make the education more easily and comfort.

DISADVANTAGES:-

- The equipment used in virtual reality are very expensive.
- It consists of complex technology.
- In virtual reality environment we can't move by our own like in the real world.

APPLICATIONS OF VIRTUAL REALITY

There are a wide variety of applications for virtual reality which include:

• Architecture

• Medicine

• Sport

• The Arts

Ref. No.SVEC/CSE/Reports/2020-2021/01

CSE Progress Report from 1st June 2020 to 31st August 2020**1) Details of faculty attended FDPs, Workshops, Seminars, Conferences / Certification Courses**

etc., outside the college as well as in the college:

a) FDPs, Workshops, Seminars, Conferences attended by Faculty:

S.no	Name of the faculty	Name of Workshop/Seminar/FDP/SDP Attended	Location	No. of Days	From Date	To Date
1.	D.Anjani Suputri Devi	Data Structures Using Python	Sri Vasavi Engineering College	6 days	03.08.2020	08.08.2020
2.	K. Venkatesh	Data Structures Using Python	Sri Vasavi Engineering College	6 days	03.08.2020	08.08.2020
3.	N.V. Murali Krishna Raja	Privacy and Security in IOT	Anil Neerukonda Institute of technology and Sciences	6 days	27.07.2020	01.08.2020
4.	G. Sriram Ganesh	Block Chain Technology	Skill AP	10 hours	13.07.2020	17.07.2020
5.	Y.Divya Vani	Block Chain Technology	Skill AP	10 hours	13.07.2020	17.07.2020
6.	M. Satyanarayana Reddy	Outcome Based Education	Sri Vasavi Engineering College	1 week	07.07.2020	13.07.2020
7.	N.V. Murali Krishna Raja	Deep Learning and its applications: Theory to Practice	Sasi Institute of Technology and Engineering	5 days	06.07.2020	10.07.2020
8.	A. Leelavathi	Research insight Zones in machine learning	Sri vasavi engineering college	3 days	25.06.2020	27.06.2020
9.	N.V. Murali krishna Raja	Data Handling and Data Visualization using Python	Swarnandhra Institute of Engineering and Technology	5 days	22.06.2020	24.06.2020
10.	Dr. G Loshma	Microsoft Business Intelligence	Satyabama Institute of Science and Technology	3 days	22.06.2020	24.06.2020
11.	N.V. Murali krishna Raja	Applied Machine Learning and Deep Learning	Andhra Pradesh State Skill Development Corporation(APSSDC)	6 days	15.06.2020	20.06.2020
12.	Dr. G Loshma	Applied Machine Learning and Deep Learning	Andhra Pradesh State Skill Development Corporation(APSSDC)	6 days	15.06.2020	20.06.2020

13.	Dr.O Sri Nagesh	Applied Machine Learning and Deep Learning	Andhra Pradesh State Skill Development Corporation(APSSDC)	6 days	15.06.2020	20.06.2020
14.	B.Sri ramya	Cyber Security	JNTUK university college of Engineering, vizianagaram	1 week	11.06.2020	16.06.2020
15.	N.V. Murali Krishna Raja	Block chain technology	Gudlavalleru Engineering College	5 days	09.06.2020	13.06.2020
16.	B.Madhava Rao	Block chain technology	Gudlavalleru Engineering College	5 days	09.06.2020	13.06.2020
17.	M.Nageswararao	Python 3.4.3	Pragathi engineering college	1week	08.06.2020	13.06.2020
18.	G.Sriramganesh	Block chain technology	Vignans Institute of engineering for womens	5 days	03.06.2020	07.06.2020
19.	Dr D. Jaya Kumari	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
20.	K. Lakshmi Narayana	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
21.	D. S. L. Manikanteswari	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
22.	A.Leelavathi	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
23.	P.Siresha	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
24.	A.Rajesh	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
25.	Y.Divya Vani	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
26.	K. Venkatesh	FDP on Data Science	APSSDC	60 Hours	01.06.2020	30.06.2020
27.	B.Sri ramya	Web Designing Using ReactJs	JNTUK university college of Engineering, vizianagaram	1 week	01.06.2020	13.06.2020
28.	B.Krishna Prasad	Mathematical Modeling in multidisciplinary Domain	Bannari Amman Institute of technology	7 days	01.06.2020	07.06.2020
29.	M.Nageswararao	Internet of things and artificial intelligence applications	K L Deemed university, Vaddeswararam	6 days	01.06.2020	06.06.2020
30.	B.Krishna Prasad	Python web Application Framework using Flask and Django	Pragati Engineering college	6 days	01.06.2020	06.06.2020
31.	D.Sasi Rekha	IOT-Applications	Vikas group of institutins	5 days	01.06.2020	05.06.2020
32.	G.Sriramganesh	Research Challenges in Computer science and engineering[RCCSE]-2020	Ramachandra college of engineering	5 days	01.06.2020	05.06.2020

(b) Certification Programmes attended by Faculty: 16

S.no	Name of the faculty	Name of the Course certificate Attended	Certification Authority	Duration	Date
1.	Dr. K. Shirin Bhanu	Python (Intermediate)	HackerRank	2 hours	09-09-2020
2.	Dr. K. Shirin Bhanu	Python (Basic)	HackerRank	2 hours	09-09-2020
3.	Dr. G. Loshma	Introduction to Applied Machine Learning	Coursera	4 weeks	02-07-2020
4.	A. Leelavathi	How to prepare manuscript	Elsevier-Researcher Academy Module	1 hour	02-07-2020
5.	G. Sriramganesht	Block Chain Basics	Coursera	4 weeks	21-06-2020
6.	Dr. K. Shirin Bhanu	Foundational Artificial Intelligence	SkillUp	6 weeks	16-06-2020
7.	Dr D.Jaya Kumari	Pythn for Beginners	E&ICT	30 hours	15-06-2020
8.	Dr. K. Shirin Bhanu	Python Data Structures	Coursera	4 weeks	15-06-2020
9.	Dr. G. Loshma	Best Data Science & Business analytics course	Udemy	8 hrs	11-06-2020
10.	Dr. G. Loshma	Foundational Artificial Intelligence	SkillUp	6 weeks	08-06-2020
11.	G. Sriramganesht	Data Security in the cloud	IEEE Continuing Education	3 Hrs	07-06-2020
12.	V. S. Naresh	Block Chain Platforms	Coursera	4 weeks	06-06-2020
13.	V. S. Naresh	Smart Construct	Coursera	4 weeks	05-06-2020
14.	V. S. Naresh	Decentralized Applications	Coursera	4 weeks	05-06-2020
15.	Dr. G. Loshma	Python Data Structures	Coursera	4 weeks	04-06-2020
16.	V. S. Naresh	Blockchain Basics	Couesera	4 weeks	03-06-2020

2) Workshops/FDPs/Guest Lectures etc. conducted by the Department to the students:01

S.No	Date	Event Name	Name of the Eminent Guest	Audience	No of Students participated
1.	06-06-2020	Guest Lecture on Scope of Future Technologies and Career Guidance	Mr. Ravi Kumar Vempali, Alumni working in Quinnox	IV CSE, I SEM	70

3. FDP's Conducted by the Department: 02

S.No.	Date	Title	Audience	No of Faculty participated
1.	03.08.2020 to 08.08.2020	FDP on "Data Structures using Python"	Faculty	35
2.	25.06.2020 to 27.06.2020	FDP on "Research Insights in Machine Learning"	Faculty	150

4) Papers Published/ Presented In Conferences: 03

S.No.	Name of the Staff	Designation	Title of the Publication	Publication Details	INDEXING SCI/SCOPUS/UGC LISTED/OTHERS
1.	Dr V. S Naresh	Associate Professor	Secure Dynamic Interactive Blood Bank based on Cognitive Computing	International Journal of Industrial Engineering and Production(IJIEPR). Volume 31, Issue 0(6-2020), June 16 th , 2020	Free SCOPUS
	Dr.O. Sri Nagesh	Assistant Professor			
2.	Dr.O. Sri Nagesh	Assistant Professor	Comparative analysis of MOD-ECDH algorithm with various algorithms	International Journal of Automation of Placement and Club Activities Industrial Engineering and Production(IJIEPR). Volume 31, Issue 0(6-2020), June 16 th 2020	Free SCOPUS
	Dr V. S Naresh	Associate Professor			
3.	Mr S Kumar Reddy Mallidi	Assistant Professor	Feature Reduction and Optimization of Malware Detection System Using Ant Colony Optimization and Rough Sets	International Journal of Information Security and Privacy Volume 14 • Issue 3 • July-September 2020	SCOPUS

b) Patents Published by Faculty:

S.No.	Name of the faculty	Title of Invention	Application Number	Filing/ Publish/ Granted	Date
1.	Dr K Shirin Bhanu Dr G Loshma Dr J Veera Raghavan Mr Ch Raja Ramesh	Smart Fruit Picker For Fruit Categorization And Quality Identification	20204103669A	Published	11/09/2020
2.	Mr S Kumar Reddy Mallidi	A Method And Apparatus For Voice-Based Smart Bluetooth Switching And Relaying With Multiple Peer-To-Peer Bluetooth Connections	20204103434A	Published	04/09/2020
3.	Dr G Loshma	Centralized Artificial Intelligence Base Toxicology Training Model For Environmental Public Health Assessment	2020101666	Granted	26/08/2020
4.	Mr S Kumar Reddy Mallidi	An Apparatus For Authenticating And Assessing The Driving Skills Of An At An Apparatus For Authenticating And Assessing The Driving Skills Of An AtLeast A Person	20204103380A	Published	21/08/2020
5.	Dr.V S Naresh	System And Method For Multiple Group Session Key Agreement Based On Blockchain Smart Contract Centric Computing	20204103103A	Published	31/07/2020

5) Student Achievements:

a) Certification Details (UDEMY, COURSERA, E-Box etc.)

LEADERSHIP

GUIDANCE

SOLUTION

VISION

TEAMWORK

DIRECTION

STRATEGY

COMMUNICATION

GOAL

What Is Leadership ?

The word **“leadership”** can bring to mind a variety of images

- › A political leader, pursuing a passionate, personal cause
- › An explorer, cutting a path through the jungle for the rest of his group to follow
- › An executive, developing her company's strategy to beat the competition

Leaders help themselves and others to do the right things. They set direction, build an inspiring vision, and create something new. Leadership is about mapping out where you need to go to “win” as a team or an organization; and it is dynamic, exciting, and inspiring.

Yet, while leaders set the direction, they must also use management skills to guide their people to the right destination, in a smooth and efficient way.

Qualities that will make you stand out from the crowd

1. Leadership as position

Position based leadership assumes it is where people operate that make them leaders. It implies that the character of the leader is less important than their position.

2. Leadership as person

Person based leadership says it is who you are that makes you a leader. The great leader is heroic or charismatic? Do people follow because there is an emotional relationship between leader and follower.

3. Leadership as result

Results based leadership focuses on what leaders do. Employees willingly follow result-based leaders who know both who they are and where they are going.

4. Leadership as process

The process-based leadership considers the relationship between leader and practice. It is what leaders do that matters. The process of influencing the activities of an individual or a group in efforts toward goal achievement in a given situation.

Leadership Styles

Different leadership styles exist in work environments. The culture and goal of an organization determine which leadership style fits best. Some organizations offer different leadership styles within an organization, depending on the necessary tasks to complete and departmental needs.

Leadership skills

Communication, Motivation, Delegating, Positivity, Trustworthiness, Creativity, Feedback, Responsibility, Commitment and Flexibility etc., These are important skills that every leader can acquire.

Conclusion

Leadership is about making others better as a result of your presence and making sure that impact lasts in your absence.

"Leaders are people who do the right thing; managers are people who do things right"

SHIPYARD

**This article is about the ship repair
and construction yard**

SHIPYARD

A shipyard (also called a dockyard) is a place where ships are built and repaired. These can be yachts, military vessels, cruise liners or other cargo or passenger ships. Dockyards are sometimes more associated with maintenance and basing activities than shipyards, which are sometimes associated more with initial construction. The terms are routinely used interchangeably, in part because the evolution of dockyards and shipyards has often caused them to change or merge roles.

The shipyard started offering ship repair services in 1982 and has undertaken upgrades and repairs for all types of ships including ships for the oil exploration industry as well as scheduled maintenance and life extension for ships of the Indian Navy, Indian Coast Guard, the Union territory of Lakshadweep, Fisheries and Cochin Port Trust, SCI and the Oil and Natural Gas Corporation (ONGC). It has performed major overhauls for the aircraft carrier, INS Viraat. It has also performed major overhauls for the aircraft carrier INS Vikramaditya two times on 2016 and 2018 respectively.

SHIPYARD

COUNTRIES WITH LARGE SHIPBUILD INDUSTRIES:

include Australia, Brazil, China, Croatia, Denmark, Finland, France, Germany. The shipbuilding industry is more fragmented in Europe than in Asia with larger companies. Many naval vessels are built or maintained in national government or navy.

The world's earliest known dockyards were built in the Harappan port city of Lothal circa 2600 BC in Gujarat, India. [citation needed] Lothal's dockyards connected to an ancient course of the Sabarmati river on the trade route between Harappan cities in Sindh and the peninsula of Saurashtra when the surrounding Kutch desert was a part of the Arabian Sea. Lothal engineers accorded high priority to the creation of a dockyard and a warehouse to serve the purposes of naval trade. The dock was built on the eastern flank of the town, and is regarded

Ships were the first items to be manufactured in a factory, several hundred years before the Industrial Revolution, in the Venice Arsenal, Venice, Italy. The Arsenal apparently mass-produced nearly one ship every day using pre-manufactured parts, and assembly lines and, at its height, employed 16,000 people.

SHIPYARD

The name of the ancient Greek city of Naupactus means "shipyard" (combination of the Greek words ναύς naus ship, boat and πήγνυμι pēgnumi, pegnymi builder, fixer). Naupactus' reputation in this field extends to the time of legend, where it is depicted as the place where the Heraclidae built a fleet to invade the Peloponnesus. In the Spanish city of Barcelona, the Drassanes shipyards were active from at least the mid-13th century until the 18th century, although it at times served as a barracks for troops as well as an arsenal. During its time of operation it was continuously changed, rebuilt and modified, but two original towers and part of the original eight construction naves remain today. It is currently a maritime museum

The “**Great Conjunction of Jupiter and Saturn 2020**” awes the world!

What’s this conjunction..?

*A great **conjunction** is a conjunction of the planets **g** when the two planets appear closest together in the sky.*

*Great conjunctions occur approximately **every 20 years** when Jupiter “**overtakes**” Saturn in its orbit.*

Astronomers use the word conjunction to describe meetings of planets and other objects on our sky’s dome. They use the term great conjunction to describe meetings of Jupiter and Saturn, which are the two biggest worlds in our solar system. Though the two planets will appear spectacularly close together on the sky’s dome now, Jupiter and Saturn are actually 456 million miles (734 million km) apart. Saturn is nearly twice as far away as Jupiter.

When do they happen?

Jupiter-Saturn conjunctions happen every 20 years; the last one was in the year 2000. But these conjunctions aren't all created equal. The 2020 great conjunction of Jupiter and Saturn will be the closest since **1623** and the closest observable since **1226**! 2020's extra-close Jupiter-Saturn conjunction won't be matched again until the Jupiter-Saturn conjunction of March 15, 2080.

now – not far from the sunset glare – easily visible and exceedingly noticeable as two bright objects near each other. Plus, in the days prior to the conjunction (last week), the moon appeared in the evening sky, pointing the way to the planets.

Saturn is the sixth planet outward from the sun. It's the farthest and slowest-moving planet that we can easily see with the eye alone. Dazzling Jupiter, the fifth planet outward

lance at past 2000's great conjunction...

At the 2000 great conjunction, 20 years ago, Jupiter and Saturn were near the sun in our sky and difficult to observe. We're due for a more observable great conjunction. Jupiter and Saturn are up every evening

The spacing between the planets varies from conjunction to conjunction with most events being 0.5 to 1.3 degrees (30 to 78 arcminutes, or 1 to 2.5 times the width of a full moon). Very close conjunctions happen much less frequently (though the maximum of 1.3° is still close by inner planet standards); separations of less than 10 arcminutes have only happened four times since 1200, most recently in 2020.

from the sun, is the second-slowest bright planet, after Saturn. It's by virtue of their slow motions in front of the constellations of the zodiac that Jupiter and Saturn have the least frequent of bright-planet conjunctions.

Saturn takes nearly 30 years to go around the sun, while Jupiter takes nearly 12 years. Thus, every 20 years, Jupiter catches up to Saturn as viewed from Earth.

Why do these conjunctions happen..?

Here's why these great Jupiter/Saturn conjunctions happen every 20 years. Each year, Saturn completes about 12 degrees of its orbit around the sun, whereas Jupiter completes about 30 degrees. Therefore, in one year, Jupiter closes the gap between itself and Saturn by about 18 degrees ($30 - 12 = 18$ degrees).

In a period of 20 years, Jupiter gains 360 degrees on Saturn ($18 \times 20 = 360$ degrees), therefore lapping the ringed planet once every 20 years.

Where and how it can be seen?

NASA says the timing of the conjunction will be such that everyone around the world will be able to view it.

Both the planets will appear so close to each other that a pinkie finger at arm's length will be enough to cover both the planets in the sky.

If you happen to view through a telescope, Jupiter's four large moons orbiting the planet will also be seen.

The great conjunction will be visible nearly an hour after sunset in the southwestern sky.

In India, the conjunction will be visible between 6:30 pm and 7:30 pm.

Astronomy enthusiasts witnessed the rare conjunction of the two planets, Jupiter and Saturn through a telescope in Indore, Madhya Pradesh.

It was also seen in Bengaluru, Karnataka ; Nagpur, Maharashtra.
