# 5G NETWORK

# 5

# G

PLANNING FOR 5G IS UNDERWAY, WITH MOBILE NETWORK OPERATORS (MNOs) ALREADY TAKING 5G CONSIDERATION AS THEY ARCHITECT NEW NETWORK BUILDS. TALKS 5G ROLLOUTS AND HOW ULTIMATE SUCCESS WILL DEPEND MNOs MAKING SURE THAT THEY HAVE FIBER IN PLACE FOR THE MASSIVE BANDWIDTH INCREASE THAT ARE SURE TO COME AS 5G GOES ONLINE

THE  
FUTURE

**WILL 5G SMART PHONES SUPPORT 10 Gbps?**  
**WILL THE MARKET FOR THE 5G BACKHAUL SERVICES BE THE SAME AS IT IS FOR 4G?**  
**HOW WILL 5G CHANGE THE WIRED ARCHITECTURE THAT SUPPORTS 4G MOBILE BACKHAUL?**  
**WHAT IMPACT WILL 5G HAVE ON BACKHAUL NETWORKS?**

TO KNOW ALL THESE THINGS JUST GO THROUGH THE FOLLOWING ARTICLE:

5G is the 5<sup>th</sup> generation mobile network. It is a new global wireless standard after 1G, 2G, 3G, 4G networks. 5G enables a new kind of network that is designed to connect virtually everyone and everything together including machines, objects, and devices.

5G wireless technology is meant to deliver high- multi-Gbps peak data speeds, ultra low latency, more reliability, massive network capacity, increased availability, and a more uniform user experience to more users.

Up to 100 times faster than 4G, 5G is creating never-before-seen opportunities for people and businesses. Faster connectivity speeds, ultra-low latency and greater bandwidth is advancing societies, transforming industries and dramatically enhancing day-to-day experiences. Services that we used to see as futuristic, such as e-health, connected vehicles and traffic systems and advanced mobile cloud gaming have arrived.

## Evolution to 5G Standalone (SA)

Until now:  
4G core + 5G radio

From 2020/2021:  
Addition of 5G core

- Support for new applications (AR/VR, gaming, smart factories, connected vehicles)
- Optimized use of 5G Radio
- Better service differentiation and user experience
- Ability to mix software from different vendors

Beyond being able to download a full-length HD movie to your phone in seconds (even from a crowded stadium), 5G is really about connecting things everywhere – reliably, without lag – so people can measure, understand and manage things in real time.

5G runs on the same radio frequencies that are currently being used for your smartphone, on Wi-Fi networks and in satellite communications, but it enables technology to go a lot further.

Beyond being able to download a full-length HD movie to your phone in seconds (even from a crowded stadium), 5G is really about connecting things everywhere – reliably, without lag – so people can measure, understand and manage things in real time.

This has enormous potential – and together, we will take it to the next level.

Beyond being able to download a full-length HD movie to your phone in seconds (even from a crowded stadium), 5G is really about connecting things everywhere – reliably, without lag – so people can measure, understand and manage things in real time.

5G runs on the same radio frequencies that are currently being used for your smartphone on Wi-Fi networks and satellite communications, but it enables technology to go a lot further.

Faster connectivity speeds, ultra-low latency and greater bandwidth is advancing societies, transforming industries and dramatically enhancing day-to-day experiences. Services that we used to see as futuristic, such as e-health,

## Elon Musk

American entrepreneur

Elon Musk, (born June 28, 1971, Pretoria, South Africa), South African-born American entrepreneur who cofounded the electronic-payment firm PayPal and formed SpaceX, maker of launch vehicles and spacecraft. He was also one of the first significant investors in, as well as chief executive officer of, the electric car manufacturer Tesla.

### Early life

Musk was born to a South African father and a Canadian mother. He displayed an early talent for computers and entrepreneurship. At age 12 he created a video game and sold it to a computer magazine. In 1988, after obtaining a Canadian passport, Musk left South Africa because he was unwilling to support apartheid through compulsory military service and because he sought the greater economic opportunities available in the United States.

### PayPal and SpaceX

Musk attended Queen's University in Kingston, Ontario, and in 1992 he transferred to the University of Pennsylvania, Philadelphia, where he received bachelor's degrees in physics and economics in 1997. He enrolled in graduate school in physics at Stanford University in California, but he left after only two days because he felt that the Internet had much more potential to change society than work in physics. In 1995 he founded Zip2, a company that provided maps and business directories to online newspapers. In 1999 Zip2 was bought by the computer manufacturer Compaq for \$307 million, and Musk then founded

an online financial services company, X.com, which later became PayPal, which specialized in transferring money online. The online auction eBay bought PayPal in 2002 for \$1.5 billion.

Musk was long convinced that for life to survive, humanity has to become a multiplanet species. However, he was dissatisfied with the great expense of rocket launchers. In 2002 he founded Space Exploration Technologies (SpaceX) to make more affordable rockets. Its first two rockets were the Falcon 1 (first launched in 2006) and the larger Falcon 9 (first launched in 2010), which were designed to cost much less than competing rockets. A third rocket, the Falcon Heavy (first launched in 2018), was designed to carry 117,000 pounds (53,000 kg) to orbit, nearly twice as much as its largest competitor, the Boeing Company's Delta IV Heavy, for one-third the cost.

TESLA

TESLA

Musk had long been interested in the possibilities of electric cars, and in 2004 he became one of the major funders of Tesla Motors (later renamed Tesla), an electric car company founded by entrepreneurs Martin Eberhard and Marc Tarpenning. In 2006 Tesla introduced its first car, the Roadster, which could travel 245 miles (394 km) on a single charge. Unlike most previous electric vehicles, which Musk thought were stodgy and uninteresting, it was a sports car that could go from 0 to 60 miles (97 km) per hour in less than four seconds. In 2010 the company's initial public offering raised about \$226 million. Two years later Tesla introduced the Model S sedan, which was acclaimed by automotive critics for its performance and design. The company won further praise for its Model X luxury SUV, which went on the market in 2015. The Model 3, a less-expensive vehicle, went into production in 2017.

Musk expressed reservations about Tesla being publicly traded, and in August 2018 he made a series of tweets about taking the company private, noting that he had "secured funding." The following month the U.S. Securities and Exchange Commission (SEC) sued Musk for securities fraud, alleging that the tweets were "false and misleading." Shortly thereafter Tesla's board rejected the SEC's proposed settlement, reportedly because Musk had threatened to resign. However, the news sent Tesla stock plummeting, and a harsher deal was ultimately accepted. Its terms included Musk stepping down as chairman for three years, though he was allowed to continue as CEO.

# THE PHILADELPHIA EXPERIMENT

The Philadelphia Experiment is an alleged military experiment supposed to have been carried out by the U.S. Navy at the Philadelphia Naval Shipyard in Philadelphia, Pennsylvania, United States, sometime around October 28, 1943. The U.S. Navy destroyer escort USS Eldridge was claimed to have been rendered invisible (or "cloaked") to enemy devices.

The story first appeared in 1955, in letters of unknown origin sent to UFO writer Morris K. Jessup. It is widely understood to be a hoax; the U.S. Navy maintains that no such experiment was ever conducted, that the details of the story contradict well-established facts about USS Eldridge, and that the alleged claims do not conform to known physical laws.

The experiment was allegedly based on an aspect of some unified field theory, a term coined by Albert Einstein to describe a class of potential theories; such theories would aim to describe — mathematically and physically — the interrelated nature of the forces of electromagnetism and gravity, in other words, uniting their respective fields into a single field.

According to some accounts, unspecified "researchers" thought that some version of this field would enable using large electrical generators to bend light around an object via refraction, so that the object became completely invisible. The Navy regarded this as of military value and it sponsored the experiment.

Another unattributed version of the story proposes that researchers were preparing magnetic and gravitational measurements of the seafloor to detect anomalies, supposedly based on Einstein's attempts to understand gravity. In this version, there were also related secret experiments in Nazi Germany to find anti-gravity, allegedly led by SS-Obergruppenführer Hans Kammler.

were said to have been physically fused to bulkheads while others suffered from mental disorders, some re-materialized inside out, and still others vanished. It is also claimed that the ship's crew may have been subjected to brainwashing, to maintain secrecy of the experiment.

There are no reliable, attributable accounts, but in most accounts of the supposed experiment, USS Eldridge was fitted with the required equipment at the Philadelphia Naval Shipyard. Testing began in the summer of 1943, and it was supposedly successful to a limited extent. One test resulted in Eldridge being rendered nearly invisible, with some witnesses reporting a "greenish fog" appearing in its place. Crew members complained of severe nausea afterwards. Also, reportedly, when the ship reappeared, some sailors were embedded in the metal structures of the ship, including one sailor who ended up on a deck level below than where he began and had his hand embedded in the steel hull of the ship, as well as some sailors who went "completely bananas." There is also a claim the experiment was altered after that point at the request of the Navy, limiting it to creating a stealth technology that would render USS Eldridge invisible to radar.[citation needed] None of these allegations have been independently substantiated.

The conjecture then claims that the equipment was not properly re-calibrated, but that in spite of this, the experiment was repeated on October 28, 1943. This time, Eldridge not only became invisible, but it disappeared from the area in a flash of blue light and teleported to Norfolk, Virginia, over 200 miles (320 km) away. It is claimed that Eldridge sat for some time in view of men aboard the ship SS Andrew Furuseth, whereupon Eldridge vanished and then reappeared in Philadelphia at the site it had originally occupied. It was also said that the warship went approximately ten minutes back in time.

Many versions of the tale include descriptions of serious side effects for the crew. Some crew members
