Mphasis

Unleash the Next

Mphasis is a Bangalore-based IT services company owned by Hewlett-Packard. The company provides infrastructure technology and applications outsourcing services, as well as architecture guidance, application development and integration, and application management services. It serves financial services, telecom, logistics, and technology industries. Mphasis is ranked #7 in India IT companies and overall #165 by Fortune India 500 in 2011 with more than 40,000 employees as of 2012. In February 2014 the Mphasis company changed its logo and the Brand Name as Mphasis Unleash the Next as it seeks to boost business other than from parent Hewlett-Packard, currently its largest client. The 5th Feb 2014's announcement "it is about Mphasis being more relevant to customers, including HP," Ayyar told reporters in Bangalore

Mphasis has more than 30 offices in 19 countries with delivery centers in India, Sri Lanka, China, Australia, Japan, North America and Europe. In India it has presence with centers in Bangalore, Raipur, Chennai, Pune, Mumbai, Vadodara, Indore, Puducherry, Ahmedabad, Bhubaneswar and Mangalore

Mphasis providing information technology services to its customers around the world. Mphasis provides integrated solutions that include business process outsourcing, infrastructure technology, and application services. The application services offered by the company includes application development as well as applications maintenance and support services

Revenue 59.36 billion

Profit 7.43 billion

Number of employees:48,000+

Ruby

Ruby is...

A dynamic, open source programming language with a focus on simplicity and productivity. It has an elegant syntax that is natural to read and easy to write.

Features of Ruby language

1. Objects everywhere! – In Ruby everything is an object including simple numeric values.
2. Blocks – Blocks is a powerful feature in Ruby which simplifies programming. Blocks are code blocks which can be passed as a parameter to a method. Using this feature it is easy to build code libraries which can delegate varying functionality to code blocks to be built later. Here is an example which prints out all elements in an array,
3. Implicit return value in methods – Value of the last expression in a method becomes the return value of the method. In Ruby return keyword is optional. In the following example, 8 is the return value.
4. In Ruby everything is open! – In Ruby you can easily extend classes and modules. This means that nothing in Ruby (including built in classes and modules) are closed!. Interestingly additional methods can be added to a class even at runtime. Here is an example in which we add a previous method to FixNum class
5. Missing unary operators in Ruby – Unary operators ++ and — are not supported in Ruby. Instead you can use += operator.
6. Ruby supports parallel assignment – It is possible to change multiple variables in a single assignment. The best example is the swapping of two variables as given below,
7. In Ruby strings are mutable – In Ruby it is possible to change a string variable in place. Hence unlike Java, the same string literal when used multiple times will point to different object instances.

4G Technology

The Fourth Generation (4G) Technology is the fastest Technology provide for data transfer. 4G is the short term for fourth-generation wireless. It is still a research lab standard, the stage of broadband mobile communications that will replace the third generation (3G).

4G is the short term for fourth-generation wireless. It is still a research lab standard , the stage of broadband mobile communications that will supersede the third generation (3G). It is expected that end-to-end IP and high-quality streaming video will be among 4G's distinguishing features. A 4G system will be able to provide a comprehensive IP solution where voice , data and streamed multimedia can be given to the users on “ Anytime Anywhere ” basis and higher data rates than the previous generations. It will be a fully IP based integrated system capable of providing between 100 Mbps to 1 Gbps in both indoor and outdoor with premium quality and high security.

APPLICATIONS:

- 1.The applications of 4G are called “KILLER APPLICATIONs” as it is going to bring to revolution in the internet world.
2. High Speed Data Rate due to which a movie can be downloaded in 2 to 3 minutes.
3. More Security.
4. Video Conferencing.
5. Higher Bandwidth.
6. Global Roaming.

GOOGLE MAPS

Google Maps is a mapping mobile app developed by Google for the Android and iOS operating systems; it uses Google Maps for its information. It was first released for Android on September 23, 2008, and later for iOS on December 13, 2012 as an alternative to Apple Maps, which was released with iOS 6.

Features

Google Maps for iOS has many of the features that are in their Android map application, including turn-by-turn navigation, street view, and public transit information. The application's user interface has been completely redesigned. The original version did not support the iPad, but Google planned to add iPad support. iPad support was added with version 2.0. As of version 6.9 Google Maps offers offline access to downloaded maps of certain countries, a feature only offered in Labs of previous versions. As of 2013, 150 countries are available offline and Colombia is one country that is not available offline.

Use

Maps and related information are not included in the installed Google Maps for Android file; an Internet connection is required, as for iPhone's Google Maps application. An automatic map caching feature temporarily stores recently viewed areas, reducing the amount of data to be downloaded. There is also a 'Download Map Area' feature in the Labs section of Google Maps which enables the user to download the basic road map and landmark data for an area of 10 square miles (26 km²) around any point; but even after a map of an area is downloaded, a data connection is still needed to "see satellite view and 3D buildings, search for Places and get directions."

Details of Special Training Sessions Organized

Student Enrichment Course	Organization Name	Date & Duration	Target Audience
Oracle WDP Java 7 Phase-1	Oracle India Pvt. Ltd.	21/08/14 to 26/08/14 (20 Hours Training)	4 th CSE 82 Students

Sahaya Activities

S.No	Date	Service Activity Details
1	24/07/2014	Donated Rs.18,000 to M. Naga Lakshmi, CSE student towards medical expenses due to her accident.

The following competitions are conducted on the eve of Engineer's Day

- Puzzles
- LAN Gaming
- Code – O - Greek
- Memory Buzz
- Drawing
- Technical Presentations
- Posters
- Ad Making
- Quiz

Welcome new faculty joining our CSE Department

We are exceedingly pleased to welcome Dr.Y.S.S.R Murthy as a professor in our department. He has completed his Ph.D in computer science and engineering and worked as HOD, Dean Academics and Principal in various colleges. His area of expertise is DataMining and Cloud Computing and his subjects of interest are Programming Languages, C, C++, JAVA, DS, ADSA, UNIX, MIS, DBMS, Data Mining and Cloud computing.

We're very happy to have three new faculty joining the department in the fall of 2014.

S.No	Name of the Faculty	Designation	Areas of Interest	Experience	Photo
1.	M. Rama Rajeswari	Asst. Prof.	OOP, SE, DataStructures C, Java, Web-Technologies	4yrs	
2.	J. Vijithanand	Asst. Prof.	CN, OS, SE, C & DS, PPL, CO, SP M, NMS	7yrs	
3.	B. Ashok	Asst. Prof.	CO, OOAD, CO, NMS, MT	3yrs
