

SRI VASAVI ENGINEERING COLLEGE

Volume 8
Issue 4(A)

SCUD ARSENAL

vision:

To evolve as a centre of academic and research excellence in the area of Computer Science and Engineering.

mission:

- 1) To utilize innovative learning methods for academic improvement.
- 2) To encourage higher studies and research to meet the futuristic requirements of Computer Science and Engineering.
- 3) To inculcate Ethics and Human values for developing students with good character

Programme Educational Objectives (PEOs)

Graduates of CSE programme will:

1. Adapt to evolving technology.
2. Provide optimal solutions to real time problems.
3. Demonstrate his/her abilities to support service activities with due consideration for Professional and Ethical Values.

Programme Outcomes (POs)

Computer Science Engineering Graduates will be able to:

1. **Engineering knowledge:** Apply the knowledge of Mathematics, Science, Engineering Fundamentals and Concepts of Computer Science Engineering to the solution of complex Engineering problems.[K3]
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of Mathematics, Natural Sciences and Computer Science.[K4]
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specific needs with appropriate consideration for the public health and safety, and the cultural, societal and environmental considerations.[K5]
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.[K5]
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex Engineering activities with an understanding of the limitations.[K3]

-
6. **The Engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional Engineering practice.[K3]
 7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.[K3]
 8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the Engineering practice.[K3]
 9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.[K6]
 10. **Communication:** Communicate effectively on complex Engineering activities with the Engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.[K2]
 11. **Project management and finance:** Demonstrate knowledge and understanding of the Engineering and Management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.[K6]
 12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.[K1]

Programme Specific Outcomes (PSOs)

Graduates of the CSE programme will be able to:

PSO1: Use Mathematical Abstractions and Algorithmic Design along with Open Source Programming tools to solve complexities involved in Programming. [K3]

PSO2: Use Professional engineering practices and strategies for development and maintenance of software. [K3].

Preface

Dr.D.Jaya Kumari, Professor, HOD-CSE

It is my pleasure to congratulate the team that has taken the initiative for producing this magazine. It is great to find a considerable number of articles, poems and drawings that certainly prove that our staff and students are adequately equipped and possess necessary skill sets to express their talent. Reading this magazine would definitely be an inspiration and motivation for all students and staff to contribute even more to the forthcoming issues. I hope that everyone would continue to give their full efforts to keep the momentum and continue to enhance the standards of the magazine.

Editorial board

Chief Editor: Dr.D.Jaya Kumari,Professor,HOD,CSE

Editor: Mrs.B.Sri Ramya, Assistant Professor, CSE

Faculty co-ordinator: Mr.N.V M K Raja, Assistant Professor,CSE

Student Co-ordinators:

K.Venkata Alekhya(15A81A05K9)
M.Chaitanya Swaroop(16A81A0599)

Student Members:

S.V.Subbarao(15A81A05B2)
M.Vyshnavi(15A81A0528)

JULIA

Name of the language: **Julia**

Inventor: **Viral Shah**

Viral Shah CEO of Julia Computing and co-creator of the Julia programming language. Julia's story begins in 2009 when Shah and its other co-creators were looking to simplify the coding process. By 2012, the language was ready to be revealed, and on Valentine's Day the team celebrated its public launch, the 5th fastest in the world at the time 8th fastest as of November 2017.

Language features:

Julia itself remains free to use as open source language.

- Multiple dispatch: providing ability to define function behavior across many combinations of argument types
- Dynamic type system: types for documentation, optimization, and dispatch
- Good performance, approaching that of statically-typed languages like C
- A built-in package manager
- Lisp-like macros and other metaprogramming facilities
- Call Python functions: use the PyCall package
- Call C functions directly: no wrappers or special APIs
- Powerful shell-like abilities to manage other processes
- Designed for parallel and distributed computing
- Coroutines: lightweight green threading
- User-defined types are as fast and compact as built-ins
- Automatic generation of efficient, specialized code for different argument types
- Elegant and extensible conversions and promotions for numeric and other types
- Efficient support for Unicode, including but not limited to UTF-8

Julia's macro system is hygienic, but also supports deliberate capture when desired (like for anaphoric macros) using the `esc` construct.

Julia file compiling process:

jl extension and run from the command line by typing: it run on commened line lika java

syntax: (for running Julia file is) \$julia<filename>.

Once you understand how Julia works, it's easy to write code that's nearly as fast as C.

Use with other languages:

Julia's `ccall` keyword is used to call C-exported or Fortran shared library functions individually.

Julia has [Unicode 9.0](#) support, with UTF-8 used for source code

Julia has packages supporting markup languages such as [HTML](#), [XML](#), [JSON](#) and [BSON](#) and also for [databases](#), web use in general.

```

A fresh approach to technical computing
Documentation: http://docs.julialang.org
Type "?help" for help.

Version 0.4.0-rc3+168 (2015-09-27 20:34 UTC)
Commit 483d548* (185 days old release-0.4)
x86_64-linux-gnu

julia> println("Hello, World!")
Hello, World!
julia> 
```

Compiler:

Julia2C [source-to-source compiler](#) is available from [Intel Labs](#). This [source-to-source compiler](#) is a fork of Julia

Julia is a multi-paradigm it has combining features of imperative, functional, and object-oriented programming. Julia provides ease and expressiveness for high-level numerical computing, in the same way as languages such as R, MATLAB, and Python, but also supports general programming.

NOSQL DATABASES

DIFFERENT TYPES OF NOSQL DATA BASES

There have been various approaches to classify NoSQL databases, each with different categories and subcategories, some of which overlap. What follows is a basic classification by data model, with examples:

Column: Accumulo, Cassandra, Druid, HBase, Vertica.

Document: Apache CouchDB, ArangoDB, BaseX, Clusterpoint, Couchbase, CosmosDB, HyperDex, IBM Domino, MarkLogic, MongoDB, OrientDB, Qizx, RethinkDB

Key-value: Aerospike, Apache Ignite, ArangoDB, Couchbase, Dynamo, FairCom ctreeACE, FoundationDB, HyperDex, InfinityDB, MemcacheDB, MUMPS, Oracle NoSQL Database, OrientDB, Redis, Riak, Berkeley DB, SDBM/Flat File dbm

Graph: AllegroGraph, ArangoDB, InfiniteGraph, Apache Giraph, MarkLogic, Neo4J, OrientDB, Virtuoso

Multi-model: Couchbase, FoundationDB, InfinityDB, MarkLogic, OrientDB

HERE WE ARE GOING TO DESCRIBE ON APACHE CASSANDRA

APACHE CASSANDRA

What is Apache Cassandra?

Apache Cassandra is an open source, distributed and decentralized/distributed storage system (database), for managing very large amounts of structured data spread out across the world. It provides highly available service with no single point of failure.

Listed below are some of the notable points of Apache Cassandra:

It is scalable, fault-tolerant, and consistent

It is a key-value as well as a column-oriented database.

Its distribution design is based on Amazon's Dynamo and its data model on Google's Bigtable.

Created at Facebook, it differs sharply from relational database management systems.

Cassandra implements a Dynamo-style replication model with no single point of failure, but adds a more powerful "column family" data model.

Cassandra is being used by some of the biggest companies such as:

Facebook, Twitter, Cisco, Rackspac, Twitter, Netflix, and more.

Why to choose Cassandra ?

There are many which identify it as a column oriented database, other as a row-oriented and then who define it as a hybrid way of both. Cassandra stores file, it uses the *-Index.db file to access at the right position of the *-Data.db file where it is stored the bloom filter, column index and then the columns of the required row.

History:-

Apache Cassandra was originally developed by Avinash Lakshman (one of the authors of Amazon's Dynamo) and Prashant Malik at Facebook for inbox search. Cassandra was published as an open source project in Google Code in July 2008. It was accepted into Apache Incubator in March 2009. Since February 2010, Cassandra has been an 'Apache top-level project'.

Features of Cassandra:

Cassandra has become so popular because of its outstanding technical features.

Given below are some of the features of Cassandra:

- **Decentralized:-** Every node in the cluster has the same role. There is no single point of failure. Data is distributed across the cluster (so each node contains different data), but there is no master as every node can service any request.
- **Supports replication and multi data center replication:-** Replication strategies are configurable. Cassandra is designed as a distributed system, for deployment of large numbers of nodes across multiple data centers. Key features of Cassandra's distributed architecture are specifically tailored for multiple-data center deployment, for redundancy, for failover and disaster recovery.
- **Scalability:-** Designed to have read and write throughput both increase linearly as new machines are added, with the aim of no downtime or interruption to applications.
- **Fault-tolerant:-** Data is automatically replicated to multiple nodes for fault-tolerance. Replication across multiple data centers is supported. Failed nodes can be replaced with no downtime.
- **Tunable consistency:-** Writes and reads offer a tunable level of consistency, all the way from "writes never fail" to "block for all replicas to be readable", with the quorum level in the middle.
- **MapReduce support:-** Cassandra has Hadoop integration, with MapReduce support. There is support also for Apache Pig and Apache Hive.

-K.N.L.Susmitha(15-5K8),

K.Supriya(15-541).

WEB TECHNOLOGY

TRENDING WEB TOOLS :

1. **ANGULAR JS:**

2. Laravel.

3. React.js.

4. Node.js

5. Asp.NET.

6. Meteor.js.

7. Bootstrap

Bootstrap

Bootstrap?

Bootstrap is a free front-end framework for faster and easier web development. Bootstrap includes HTML and CSS based design templates for typography, forms, buttons, tables, navigation, modals, image carousels and

many other, as well as optional JavaScript plugins

Bootstrap also gives you the ability to easily create responsive designs. Responsive web design is about creating web sites which automatically adjust themselves to look good on all devices, from small phones to large desktops.

Bootstrap History

Bootstrap was developed by Mark Otto and Jacob Thornton at Twitter, and released as an open source product in August 2011 on GitHub.

In June 2014 Bootstrap was the No.1 project on GitHub!

Why to Use Bootstrap?

Easy to use: Anybody with just basic knowledge of HTML and CSS can start using Bootstrap

Responsive features: Bootstrap's responsive CSS adjusts to phones, tablets, and desktops

Mobile-first approach: In Bootstrap 3, mobile-first styles are part of the core framework

Browser compatibility: Bootstrap is compatible with all modern browsers (Chrome, Firefox, Internet Explorer, Safari, and Opera)

Bootstrap CDN

If you don't want to download and host Bootstrap yourself, you can include it from a CDN (Content Delivery Network).

MaxCDN provides CDN support for Bootstrap's CSS and JavaScript. You must also include jQuery

Creating first web page using bootstrap:

1. Add the HTML5 doctype

Bootstrap uses HTML elements and CSS properties that require the HTML5 doctype.

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="utf-8">
</head>
</html>
```

2. Bootstrap 3 is mobile-first

Bootstrap 3 is designed to be responsive to mobile devices. Mobile-first styles are part of the core framework.

To ensure proper rendering and touch zooming, add the following `<meta>` tag inside the `<head>` element

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

The `width=device-width` part sets the width of the page to follow the screen-width of the device (which will vary depending on the device)

The `initial-scale=1` part sets the initial zoom level when the page is first loaded by the browser.

3. Containers

Bootstrap also requires a containing element to wrap site contents.

There are two container classes to choose from:

The `.container` class provides a responsive fixed width container

The `.container-fluid` class provides a full width container, spanning the entire width of the viewport.

One advantage of using the Bootstrap CDN:

Many users already have downloaded Bootstrap from MaxCDN when visiting another site. As a result, it will be loaded from cache when they visit your site, which leads to faster loading time. Also, most CDN's will make sure that once a user requests a file from it, it will be served from the server closest to them, which also leads to faster loading time.

A.Mahesh(15-564),

J.Sailaja(16-590).

CYBER SECURITY

There is no commonly agreed single definition of "cybercrime". It refers to illegal internet-mediated activities that often take place in global electronic networks.

[1] Cybercrime is "international" or "transnational" – there are 'no cyber-borders between countries'.

[2] International cybercrimes often challenge the effectiveness of domestic and international law and law enforcement. Because existing laws in many countries are not tailored to deal with cybercrime, criminals increasingly conduct crimes on the Internet in order to take advantages of the less severe punishments or difficulties of being traced. No matter in developing or developed countries, governments and industries have gradually realized the colossal threats of cybercrime on economic and political security and public interests. However, complexity in types and forms of cybercrime increases the difficulty to fight back. In this sense, fighting cybercrime calls for international cooperation. Various organizations and governments have already made joint efforts in establishing global standards of legislation and law enforcement both on a regional and on an international scale. U.S.-China's cooperation is one of the most striking progress recently because they are the top two source countries of cybercrime.

Information and communication technology (ICT) plays an important role in helping ensure interoperability and security based on global standards. General countermeasures have been adopted in cracking down cybercrime, such as legal measures in perfecting legislation and technical measures in tracking down crimes over the network, Internet content control, using public or private proxy and computer forensics, encryption and plausible deniability, etc.[2] Due to the heterogeneity of law enforcement and technical countermeasures of different countries, this article will mainly focus on legislative and regulatory initiatives of international cooperation.

what is cyber security ?

Learn about cyber security, why it's important, and how to get started building a cyber security program in this installment of our Data Protection 101 series.

A Definition of Cyber Security :

Cyber security refers to the body of technologies, processes, and practices designed to protect networks, devices, programs, and data from attack, damage, or unauthorized access. Cyber security may also be referred to as information technology security

Cyber security is important because government, military, corporate, financial, and medical organizations collect, process, and store unprecedented amounts of data on computers and other devices. A significant portion of that data can be sensitive information, whether that be intellectual property, financial data, personal information, or other types of data for which unauthorized access or exposure could have negative consequences. Organizations transmit sensitive data across networks and to other devices in the course of doing businesses, and cyber security describes the discipline dedicated to protecting that information and the systems used to process or store it. As

the volume and sophistication of cyber attacks grow, companies and organizations, especially those that are tasked with safeguarding information relating to national security, health, or financial records, need to take steps to protect their sensitive business and personnel information. As early as March 2013, the nation's top intelligence officials cautioned that cyber attacks and digital spying are the top threat to national security, eclipsing even terrorism.

Challenges of Cyber Security

For an effective cyber security, an organization needs to coordinate its efforts throughout its entire information system. Elements of cyber encompass all of the following:

- Network security
- Application security
- Endpoint security
- Data security
- Identity management
- Database and infrastructure security
- Cloud security
- Mobile security
- Disaster recovery/business continuity planning

End-user education :

The most difficult challenge in cyber security is the ever-evolving nature of security risks themselves. Traditionally, organizations and the government have focused most of their cyber security resources on perimeter security to protect only their most crucial system components and defend against known threats. Today, this approach is insufficient, as the threats advance and change more quickly than organizations can keep up with. As a result, advisory organizations promote more proactive and adaptive approaches to cyber security. Similarly, the National Institute of Standards and Technology (NIST) issued guidelines in its risk assessment framework that recommend a shift toward continuous monitoring and real-time assessments, a data-focused approach to security as opposed to the traditional perimeter-based model.

Managing Cyber Security :

The National Cyber Security Alliance, through SafeOnline.org, recommends a top-down approach to cyber security in which corporate management leads the charge in prioritizing cyber security management across all business practices. NCSA advises that companies must be prepared to "respond to the inevitable cyber incident, restore normal operations, and ensure that company assets and the company's reputation are protected." NCSA's guidelines for conducting cyber risk assessments focus on three key areas: identifying your organization's "crown jewels," or your most valuable information requiring protection; identifying the threats and risks facing that information; and

outlining the damage your organization would incur should that data be lost or wrongfully exposed. Cyber risk assessments should also consider any regulations that impact the way your company collects, stores, and secures data, such as PCI-DSS, HIPAA, SOX, FISMA, and others. Following a cyber risk assessment, develop and implement a plan to mitigate cyber risk, protect the “crown jewels” outlined in your assessment, and effectively detect and respond to security incidents. This plan should encompass both the processes and technologies required to build a mature cyber security program. An ever-evolving field, cyber security best practices must evolve to accommodate the increasingly sophisticated attacks carried out by attackers. Combining sound cyber security measures with an educated and security-minded employee base provides the best defense against cyber criminals attempting to gain access to your company’s sensitive data. While it may seem like a daunting task, start small and focus on your most sensitive data, scaling your efforts as your cyber program matures.

Cyber Security Careers :

UMUC is uniquely positioned to fill the increasing demand pipeline for cyber security jobs. There will be a 1.5 million projected global shortfall of cyber security professionals by 2019. Source Plus, opportunities are close by: The demand for cyber security professionals is expected to grow. Source When you study with UMUC, you'll be learning in the backyard of prospective employers!

E-mail & IRC related crimes:-

1. Email spoofing

Email spoofing refers to email that appears to have been originated from one source when it was actually sent from another source. Please Read

2. Email Spamming

Email "spamming" refers to sending email to thousands and thousands of users - similar to a chain letter.

3 Sending malicious codes through email

E-mails are used to send viruses, Trojans etc through emails as an attachment or by sending a link of website which on visiting downloads malicious code.

4. Email bombing

E-mail "bombing" is characterized by abusers repeatedly sending an identical email message to a particular address.

5. Sending threatening emails

6. Defamatory emails

7. Email frauds

8. IRC related

Three main ways to attack IRC are: "verbal" attacks, clone attacks, and flood attacks:

-Ch.Vinod(16-574)

LEADERS TALK

The man who changed the way we think about and use of technology forever, Steve Jobs, never wrote a single line of code. But how he became CEO of Apple inc.? He was known as one of the most influential and innovative leaders of his time. That is the potential of a leadership.

Steve Jobs:- American entrepreneur, business magnate, inventor, and industrial designer. He was the chairman, chief executive officer, and co-founder of Apple Inc. Steve Jobs's speech at Stanford University, 2005.

"I dropped out of Reed College after the first 6 months, but then stayed around as a drop-in for another 18 months or so before I really quit. So why did I drop out? And 17 years later I did go to college. After six months, I couldn't see the value in it. So I decided to drop out and trust that it would all work out OK. It was pretty scary at the time, but looking back it was one of the best decisions I ever made. The minute I dropped out I could stop taking the required classes that didn't interest me, and begin dropping in on the ones that looked interesting.

After striving hard for ten years, when we were designing the first Macintosh computer, it all came back to me. And we designed it all into the Mac. It was the first computer with beautiful typography. If I had never dropped in on that single course in college, the Mac would have never had multiple typefaces or proportionally spaced fonts. Again, you can't connect the dots looking forward; you can only connect them looking backwards. So you have to trust that the dots will somehow connect in your future. You have to trust in something - your gut, destiny, life, karma, whatever. This approach has never let me down, and it has made all the difference in my life. Later I got fired from the company that I started but it turned out best thing that could have ever happened to me. The heaviness of being successful was replaced by the lightness of being a beginner again, less sure about everything. It freed me to enter one of the most creative periods of my life.

Sometimes life hits you in the head with a brick. Don't lose faith. I'm convinced that the only thing that kept me going was that I loved what I did. You've got to find what you love. And that is as true for your work as it is for your lovers. Your work is going to fill a large part of your life, and the only way to be truly satisfied is to do what you believe is great work. And the only way to do great work is to love what you do. If you haven't found it yet, keep looking. Don't settle. As with all matters of the heart, you'll know when you find it. Stay Hungry. Stay Foolish. And I have always wished that for myself. And now, as you graduate to begin a new, I wish that for you.

Stay Hungry. Stay Foolish".

Better leaders develop better employees and better employees develop better products.

M.Vyshnavi(15-528),D.Naveen kumar (16-582)

PLACEMENT ESSENTIALS

1. Quick learners - Ability to gain new skills faster:

The most important factor that is taken into account by an organisation's human resources team is a prospective employee's capability for quick learning.

2. Interpersonal and communication skills:

Possessing good communication skills is an added advantage for many job seekers these days. Being able to communicate in a way that is comprehensible by any person(s) in an enterprise is extremely crucial, since it can make or mar probable business pursuits or acquisitions.

3. Ability to take ownership - Initiative and accountability for one's work:

Taking ownership for one's work or responsibilities can greatly influence an employee's appeal over his/her colleagues. Completing a task to the best of one's ability and effort, and taking responsibility for the same demonstrates ambition and higher degree of competence in an employee.

4. Problem solving skills - Finding creative solutions for complex issues:

Aspiring candidates should possess the ability to develop innovative solutions for any kind of barriers or administrative issues.

5. Sincerity, hard work and perseverance - Key attributes of a potential employee:

An individual should be absolutely honest towards their work to acquire greater benefits. Being tenacious helps them in eventually reaping the fruits of their labor, garnering appreciation for their work and earning

respect for their work ethics.

6. Team player:

Being an integral part of a team is crucial in furthering both personal and professional growth of an employee. Exchanging inputs with co-workers on any project can improve communication and understanding between each other, which in turn, creates a positive impact on everyone involved.

7. Personal credibility and integrity:

Organisations look for employees with strong principles who are honest about themselves and their work. They seek out employees whom they can put their trust in, i.e. the one's who can accomplish tasks without compromising the company's standards.

8. Likeability factor - Building rapport within the company:

Having a pleasing personality and friendly nature can help an individual gain trust and improve their communication with their co-workers and colleagues from other departments as well.

9. Ability to multitask:

A person's ability to multitask can increase their work efficiency, improve time management and maximize productivity. With advancements in every professional sector, the demand for skilled personnel is on the rise in order to simultaneously further organisational growth as well as the economic development of the country. Campus placement programmes are influential in develop

CULTURE

CULTURE is learned, it is shared, it takes time to develop, is transmitted across generations, and is subject to change, it cannot be isolated, culture is essential for life and it refers to pattern of human activity and the symbols that gives significance to them, it raises heart touching situations.

Culture manifests itself in the form of art, literature, clothing, customs, language and religion, the way people live and what they believe constitutes their culture, their principles and moral values also form an important part of their culture. People from different parts of the world have different cultural values. Culture differences contribute to the diversity in people's thinking and living styles.

Let us look at the basic characteristics of culture and its fundamental elements.

CULTURE IS SHARED:

Every culture is shared by a group of people, usually inhabiting the same part of the world. The region they live in, the geographical conditions around them, their country's past, the belief system and values of its people, and the heritage they are proud of, constitute their culture.

Being common to a group, these aspects develop a sense of unity and belonging among the people of that group. People of the same community share the same values, beliefs, and traditions.

Their literature and history is the same, their language and mannerisms, and the way they communicate is similar, built by their belief system, their personalities share certain traits.

Their roles in the family and the society are defined by the culture, their occupations and life styles may be influenced by their culture. Culture gives the people a collective identity, it belongs to a community and not to any single human being, it is shared.

CULTURE IS LEARNED:

Culture is not biologically passed from older generations to the newer ones. It is learned through experience. The members of a culture share certain ideals which shape their lives. The future generations learn to follow the same ideals, culture propagates.

through generations, which adopt their old customs and traditions as a part of their culture. the ideals they base their lives on, is a part of their culture. cultural values are imparted from one generation to another, which is the reason why they continue. the language, the literature, and the art forms pass down from generation to generation. culture is learned, understood, and adopted from what is taught by society and assimilated from the environment. No individual is born with a sense of culture. In the course of a life, he learns it.

CULTURE CHANGE:

Culture undergo a gradual change, with passing time, some beliefs change, certain traditions or rituals are eliminated, language and mannerisms of people change, and thus their culture. migration and globalization lead to a mixing of cultures. when people from different parts of the world come together, they influence each other and effectively, each other's cultures. these factors contribute to the formation of a multicultural society and sometimes, even new cultures develop.

Over time, some traditions are dropped out of a culture because they are dangerous or due to their arduous nature. Due to education and increased awareness, newer generations become flexible to change and look at concepts like religion and culture with a border perspective and have a liberal view about them. So some rituals or customs become less rigid, some are replaced by simpler ones and some are discontinued. due to the exposure to various cultures across the globe, people adopt some aspects of other cultures. this affects what they teach their children, thus influencing the culture of their future generations and in a small way, leading to a culture change. social thinking undergoes a transition and so does culture. gender roles change for instance, traditionally, the males children. Today, these roles have changed. in many families, women work away from home, while men take care of the kids.

All cultures change in time although their rate of change varies. its often seen that the politically or economically stronger countries influence cultures in other parts of the world, and lead to social changes worldwide, an example of this is the influence of American and European cultures on other countries

CULTURE IS ESSENTIAL:

Culture gives us an identity. the art and history that we are proud

Of, the literature we learn from, our education, and upbringing shapes our personalities. what

we observe around us, what our folk tales teach us, and what our culture sats, is deeply ingrained in our minds. our cultural values, and our system of beliefs dictates our thinking and behaviour.

Rituals and traditions are a part of our daily living. the way we carry ourselves in society and who we are as human beings , is highly influenced by culture we belong to . to make us feel a part of the group and to give us the guiding principles of life , culture is essential .

What are the elements of culture ? language , symbols , values , and norms are among the important elements of culture . our religious beliefs , customs and traditions , art , as all history , taken together can be considered as the cultural elements . They give a meaning to The concept of culture . All these are important for our overall development as individual .

Despite the efforts of the older generations to pass cultural values to the forthcoming Generations , sadly , many are unaware of their own culture . some things are lost in translation and some

CULTURE DEFINES AN "ATTITUDE"

Pari Amy Lara -Sudeepa

In The Land of Dreams the Day Started with A Lot of Ignorance, The Atmosphere Is Very Quiet and Unusual in Tee's Public Collage Even a Faded Leaf Sounds Louder, The Gates Were Opened, Leaves Were Swept Until the Road Gets Completely Visible. In couple of Hours the Entire situation of the College Was Changed, The Path Was Completely Covered with Students and The Quite Atmosphere Transformed to Noisy

Pari, A Cute and Humble Indian Girl stepped out from the Bus with pinkish Cheeks Which Are Expanded Heartfully, Her Beautiful Brown Eyes Were in A Search of Her Friend Lara, Lara Is a Pale and Thin Girl from A Marwari Family, Lara Is a Kind of Person Who Takes Immediate Strong Decisions and Never Accept Defeat.

Pari Spotted lara Passing Through College Gate, Pari Waved Her Hand with Happiness But Her Happiness hadn't last long her Pinkish Cheeks Were Back To Their Original State On Seeing Her Friend With Their defamer Called Amy. On Seeing Them Pari Memorized Their Memories. On The College Inauguration Day ,all the fresher's along With Their Parents Gathered Near The College Auditorium. Mic set's Were arranged, Agenda were prepared. The Chief Guest Of The inauguration Is famous Guitarist "John Mayor" People Gathered In Crowd's For Famous Guitarist Autograph. pari arrived to the inauguration Function With Her Younger Brother Both of them Sat In The Audience Gallery, Pari Is a Guitar Learner And she Is more interested To see The famous Guitar Player.

In Middle Of The Inauguration Management Arranged a lottery The Person Who Win In The Lottery Will Be Treated As The "Lucky Two". John Mayor picked two chits At The same time, entire gallery were in a excitement to know who the lucky person be, Those Chits Were handed To MOC, the Moc announced the Lucky Two Are miss. Pari And Lara. Pari jumped with excitement and headed towards the stage there she found a pale looking girl on the way crossing her To Reach The Stage .Both Stepped on to stage at Same Time.

After the inauguration both met again near the College food court. Both introduced Themselves. Next Day Both Arrived College at same time and Became Benchmate later turned to Soulmates. Both Were Equal In Studies, First Year They Ranked With Top Grades. People around them congratulated and Encouraged Them. Amy Felt Very Jealous On Seeing Their Friendship And Popularity .She Tried To Get High Than This Two Buddies But Failed To Do.

One Day College Organized A Inter House Debat Compitation ,Pari And lara Were Selected As Captain For Two different Teams Amy Was Selected By Lara. Compitation Begins Both Were On Their Force. Amy felt this as the right time to build a wall between them. Amy Started Becoming Close and tried to change lara mind Against Pari. Initially Lara Hadn't Believe Amy.

Finally After The Compitation pari secured first position whereas the lara got consolation. lara kept a lot of afford but fail to do so, she went home in disappointment and hadn't congrats pari. pari tried calling to lara many time but she hadn't lift her call.

(Next morning in the College she seen Lara with amy)

Pari Shouted Lara Laraa! But lara didnt respond to her,She Went With Amy Towards The Class ,Pari Felt Very Unhappy And didn't prepare For Her Second year Exams well with disappointment ,On The results days Students eagerly Waiting For Their Results, Hed Announced Amy As The College Topper And Lara pari As The Second Third,Amy felt very happy for her brutal Victory She Moved Away From Lara And celebrated Her Victory In An Excellent Way,Lara Went To Amy To Congratulate Her New Soo Called best friend Amy but, Amy turned her face which is filled with happy and proud ,Lara Noticed The change in amy And felt very Bad For Misbehaving With Her True Friend Pari.

The Next day lara sitting on a bench with the mistake she made in the case of her true friend, Then Pari Came to lara and congrated for Lara Victory, Lara with Tears Flowing On Her Cheeks hugged Pari and apologized Her Alot, Pari with a Smile Said "Only U Have Such Right Dear Best friend". Both of Them Smiled at Once. Lara Planned to Take Pari to John Mayor Concert and Night She Surprised Her with Concert Tickets.Both of Them Enjoy the Wednesday Night with Happiness, Fun and Dance...
