Cloud Computing

What is Cloud Computing?

Cloud is nothing but someone else PC. Let us discuss in detailed, Cloud computing is the on-demand delivery of compute power, database storage, applications, and other IT resources through a cloud services platform via the Internet with pay-as-you-go pricing. Whether you are running applications that share photos to millions of mobile users or you're supporting the critical operations of your business, a cloud services platform provides rapid access to flexible and low-cost IT resources.

With cloud computing, you don't need to make large upfront investments in hardware and spend a lot of time on the heavy lifting of managing that hardware. Instead, you can provision exactly the right type and size of computing resources you need to power your newest bright idea or operate your IT department. You can access as many resources as you need, almost instantly, and only pay for what you use. Cloud computing provides a simple way to access servers, storage, databases and a broad set of application services over the Internet. A cloud services platform owns and maintains the network-connected hardware required for these application services, while you provision and use what you need via a web application.

Six Advantages of Cloud Computing

- Trade capital expense for variable expense
- Benefit from massive economies of scale
- Stop guessing capacity
- Increase speed and agility
- Stop spending money running and maintaining data centers
- Go global in minutes

Types of Cloud Computing

Cloud computing provides developers and IT departments with the ability to focus on what matters most and avoid undifferentiated work such as procurement, maintenance, and capacity planning. As cloud computing has grown in popularity, several different models and deployment strategies have emerged to help meet specific needs of different users. Each type of cloud service and deployment method provides you with different levels of control, flexibility, and management. Understanding the differences between Infrastructure as a Service, Platform as a Service,

and Software as a Service, as well as what deployment strategies you can use, can help you decide what set of services is right for your needs.

Cloud Computing Models

• Infrastructure as a Service (IaaS) :

Infrastructure as a Service (IaaS) contains the basic building blocks for cloud IT and typically provide access to networking features, computers (virtual or on dedicated hardware), and data storage space. IaaS provides you with the highest level of flexibility and management control over your IT resources and is most similar to existing IT resources that many IT departments and developers are familiar with today.

• Platform as a Service (PaaS) :

Platform as a Service (PaaS) removes the need for your organization to manage the underlying infrastructure (usually hardware and operating systems) and allows you to focus on the deployment and management of your applications. This helps you be more efficient as you don't need to worry about resource procurement, capacity planning, software maintenance, patching, or any of the other undifferentiated heavy lifting involved in running your application.

• Software as a Service (SaaS) :

Software as a Service (SaaS) provides you with a completed product that is run and managed by the service provider. In most cases, people referring to Software as a Service are referring to end-user applications. With a SaaS offering you do not have to think about how the service is maintained or how the underlying infrastructure is managed; you only need to think about how you will use that particular

piece of software. A common example of a SaaS application is web-based email which you can use to send and receive email without having to manage feature additions to the email product or maintain the servers and operating systems that the email program is running on.

Cloud Computing Deployment Models

• Cloud :

A cloud-based application is fully deployed in the cloud and all parts of the application run in the cloud. Applications in the cloud have either been created in the cloud or have been migrated from an existing infrastructure to take advantage of the benefits of cloud computing. Cloud-based applications can be built on low-level infrastructure pieces or can use higher level services that provide abstraction from the management, architecting, and scaling requirements of core infrastructure.

• On-premises :

The deployment of resources on-premises, using virtualization and resource management tools, is sometimes called the "private cloud." On-premises deployment doesn't provide many of the benefits of cloud computing but is sometimes sought for its ability to provide dedicated resources. In most cases this deployment model is the same as legacy IT infrastructure while using application management and virtualization technologies to try and increase resource utilization.

• Hybrid :

A hybrid deployment is a way to connect infrastructure and applications between cloud-based resources and existing resources that are not located in the cloud. The most common method of hybrid deployment is between the cloud and existing on-premises infrastructure to extend, and grow, an organization's infrastructure into the cloud while connecting cloud resources to the internal system.

Security

Security in the cloud is much like security in your on-premises data centers—only without the costs of maintaining facilities and hardware. In the cloud, you don't have to manage physical servers or storage devices. Instead, you use software-based security tools to monitor and protect the flow of information into and of out of your cloud resources.

MOM.....The LOVE of My LIFE !!

Do you believe in love at first sight..??

I don't know about you . But I do believe . Because I love my mom since I opened my eyes.

God created mother because he could not be everywhere. MOTHER....., of all the things life has to offer , the greatest of them all . She is the only one who loves us more than anyone else in the world . She can replace anyone's place but no one can ever replace her.

Mother is a rainbow who brings colors in our lives even after a sad moment.

Being a mother is not that easy . It is a tedious task to bring up her children so that they arrive to beautiful destinations.

No matter how old we are, we always need our mother.

She never hesitates to save her children , even by sacrificing herself. The best example is a chicken that saves it's little chicks from an eagle.

Even when she is doomed of severe ill health , she tries to fulfill her responsibilities for the family.

She is the only one who never expects anything in return . A Mom is a blessing . She is a little princess , a best friend of ours who takes care a lot and the one who never leaves us.

When we are in a bathroom and screams "mom" three times, she will be landing up with a towel. she knows what her children needs :) ...

Like God has many forms , a mother , is a teacher, motivator , chef, beautiful lady , kind hearted , best friend , counselor, nurse , lullaby singer and so on..

' Mom ' is the title just above the queen.

An angel from the heaven , who carries us for nine months to introduce us to this world.

we are forever together and our love never ends.....

She is the blood of our heart that keeps us strong always.

She is our heart , even though at left , always says right . The only one whom we never want to lose , without whom our day never starts .

The love of our hearts..

Dear mom.....

I may not like you all the time

we may fight sometimes.....

but there is something to tell you...

No one can love me more , hug me tighter , kiss me deep and take care of me more than you do.

You are the only one who did not give up on me when I almost gave upon myself.

You are the only diamond of my necklace..

the pupil of my eye...

the hum of my ears...

the chant of my lips...

the thoughts of my mind...

the blood of my heart.....

the spine of my body.....

the breath of my lungs....

and the sunshine of my life...

I wanna be your daughter for every life of mine. You are my best. For all what you have done to me , my debt will never be cleared off.

I am always thankful to God for giving me such a beautiful and lovely mother.

I love you always and forever until my last breath.

Thanks a lot for being such an important part of my life.

I pray that your life must blossom always with elegance personified.....

N.Shree Lalitha

Internet of Things

IoT, Internet of things, sometimes referred to as the Internet of Everything (IoE), is changing about the world in how we live in it.

The internet of things doesn't mean that the internet just collects and distributes information. It can also feel and intelligently respond. In the medical field, in manufacturing, in agriculture, the internet of things is going to change the way we do things. It gathers information, processes the information and present it back to us in the way we can understand it. We have read and seen such things in science fiction for decades but they are now either already possible or on the brink of coming into being.

IoT Applications:

IoT applications can be found in every domain Smart homes, Wearables, Smart city, Connected car, Smart farming and soon

What IoT contains?

$$\text{IoT} = \text{ET} + \text{NT} + \text{IT}$$

IoT is combination of Embedded Technology(ET), Network Technology(NT) and Information Technology(IT).

Flow of data within the IoT device,

Micro-Controllers

Micro-Controllers like Arduino, ESP8266, Raspberry Pi, Particle Photon, BeagleBone Black, etc..., are used to develop IoT devices.

ARDUINO UNO:

Arduino UNO is the most popular prototyping board. It is one of the first development boards and manages to maintain its relevance in the new IoT scenario. It has a large community support. It has an open source IDE where its firmware can be easily programmed and compiles in Embedded C. The Arduino can be connected to most of the IoT platforms.

ESP8266:

The ESP8266 is a low cost WiFi module that can be integrated easily into IoT devices. It can be a great option for Internet of Things(IoT) projects, but can be difficult to work with it for beginner and hobbyists who do not have prior experience with the module.

RASPBERRY PI:

Raspberry Pi is low cost, credit-card sized computer that plugs into computer monitor or TV, uses a standard keyboard and mouse. It is a capable little device that enables people of all ages to explore computing, and to learn how to program in languages like scratch and python. It has large community support to implement IoT protocols and sensor interfacing.

Raspberry Pi 3

GIT

Git is the free and open source distributed version control system that's responsible for everything GitHub related that happens locally on your computer. This cheat sheet features the most important and commonly used Git commands for easy reference.

INSTALLATION & GUIs

With platform specific installers for Git, GitHub also provides the ease of staying up-to-date with the latest releases of the command line tool while providing a graphical user interface for day-to-day interaction, review, and repository synchronization.

GitHub for Windows

<https://windows.github.com>

GitHub for Mac

<https://mac.github.com>

For Linux and Solaris platforms, the latest release is available on the official Git website.

Git for All Platforms

<http://git-scm.com>

SETUP

Configuring user information used across all local repositories

```
git config --global user.name "[firstname lastname]"
```

set a name that is identifiable for credit when review version history

```
git config --global user.email "[valid-email]"
```

set an email address that will be associated with each history marker

```
git config --global color.ui auto
```

set automatic command line coloring for Git for easy reviewing.

SETUP & INIT

Configuring user information, initializing and cloning repositories

```
git init
```

initialize an existing directory as a Git repository

```
git clone [url]
```

retrieve an entire repository from a hosted location via URL

STAGE & SNAPSHOT

Working with snapshots and the Git staging area

```
git status
```

show modified files in working directory, staged for your next commit

```
git add [file]
```

add a file as it looks now to your next commit (stage)

```
git reset [file]
```

unstage a file while retaining the changes in working directory

```
git diff
```

diff of what is changed but not staged

```
git diff --staged
```

diff of what is staged but not yet committed

```
git commit -m "[descriptive message]"
```

commit your staged content as a new commit snapshot

BRANCH & MERGE

Isolating work in branches, changing context, and integrating changes

```
git branch
```

list your branches, a * will appear next to the currently active branch

```
git branch [branch-name]
```

create a new branch at the current commit

```
git checkout
```

switch to another branch and check it out into your working directory

```
git merge [branch]
```

merge the specified branch's history into the current one

```
git log
```

show all commits in the current branch's history

INSPECT & COMPARE

Examining logs, diffs and object information

```
git log
```

show the commit history for the currently active branch

```
git log branchB..branchA
```

show the commits on branch-A that are not on branch-B

```
git log --follow [file]
```

show the commits that changed file, even across renames

```
git diff branchB..branchA
```

show the diff of what is in branch-A that is not in branch-B

```
git show [SHA]
```

show any object in Git in human-readable format

TRACKING PATH CHANGES

Versioning file removes and path changes

```
git rm [file]
```

delete the file from project and stage the removal for commit

```
git mv [existing-path] [new-path]
```

change an existing file path and stage the move

```
git log --stat -M
```

show all commit logs with indication of any paths that moved

IGNORING PATTERNS

Preventing unintentional staging or committing of files

```
logs/
```

```
*.notes
```

```
pattern*/
```

Save a file with desired patterns as .gitignore with either

direct string
 matches or wildcard globs.
 git config --global core.excludesfile [file]
 system wide ignore pattern for all local repositories

SHARE & UPDATE

Retrieving updates from another repository and updating local repos:

git remote add [alias] [url]
 add a git URL as an alias
 git fetch [alias]
 fetch down all the branches from that Git remote
 git merge [alias]/[branch]
 merge a remote branch into your current branch to bring it up to date
 git push [alias] [branch]
 Transmit local branch commits to the remote repository
 git pull
 fetch and merge any commits from the tracking remote branch

REWRITE HISTORY

Rewriting branches, updating commits and clearing history

git rebase [branch]
 apply any commits of current branch ahead of specified one
 git reset --hard [commit]
 clear staging area, rewrite working tree from specified commit

TEMPORARY COMMITS

Temporarily store modified, tracked files in order to change branches

git stash
 Save modified and staged changes
 git stash list
 list stack-order of stashed file changes
 git stash pop
 write working from top of stash stack
 git stash drop
 discard the changes from top of stash stack

A.N.V.Vamsi Krishna

INSIDE YOU

Outside you, you are a single personality.
But inside you are having multiple personalities.

This is my first article.

Before writing this,
even I don't know,

that there is a Columnist hidden inside me.

Every Person is a Multi-talented
as there are so many personalities
existing inside them.

The personalities like

Singer,
Dancer,
Speaker

And Actor etc. are hidden within you
and they will come out when you are alone.

Even you are a self-motivator.

But you don't allow them to come out
when you are in a group,
due to inferiority complex.

So, you need to open up yourselves by showing all your skills to the world.

Then one day you'll find yourself in the heaven of Satisfaction.

P.Alekhya

Chatbots

Did you ever thought that a machine speaks to us just like a human, Is it possible? Yes, It is possible . The best example for this is Google Assistant, Siri, Cortana, etc.,

And these applications work on the technology called Cognitive Computing, chatbots is a part of Cognitive Computing. Now a days the things became easy, you can build and train your own cognitive model (chatbot) using some services like IBM Watson, Dialogflow, etc.,

Let us start building our own ChatBot with IBM Watson Conversation,

1) Bluemix Registration:

(NOTE : If you already have Bluemix registration jump to step 2.)

Go to <https://www.bluemix.net> and click on "Create a free account" . Fill out the form, and click on "Create Account". You will receive an email form confirmation, check it out. Open the email sent, and click on the link to confirm. Click on the "Confirm Account". Your account has been confirmed successfully. Click on the login and enter your credentials. As soon as you login in the system, you have to create an organization name, for instance your name, the name of your company, etc, and click on "Create".

The second step before you start your first application, consume a service on Bluemix you have to create a space, a space is one way to organize yours projects, and configure team work according to area or environment. For now let's create a space, for example "Dev", and click "Create". That's it! You're ready to go! Click on "I'm ready" and let's start our first app. That's your first screen, it's your Bluemix dashboard. For now, click on "Catalog".

2) Create a Watson Conversation service and your bot

Go to Watson group (left side), and click on Conversation.

As most of all service on Bluemix in this screen you have a description about the service, business model and a link to detailed documentation. Change the last part of the name of service to "-about me". It's not necessary, but it will help me us find our service easily.

Here you go!! Now you have a Watson Conversation for you. This is a service panel, where there is the service credentials and a button to open a tool. So, let's open our tool and teach Watson about our bot. Click on "Launch Tool" button.

Now you need to create a workspace, which is like a knowledge domain, or the space for a specific area which is intend to develop a Bot, for instance "Support area" or "Customer Attendance Service", etc. In this case as the proposal is develop a bot to answer about ourselves, Click on "Create a Workspace. By the way, the service bring a bot exemplo, "Car Dashboard".

Name it "About me", or as you prefer, and choose the language, in this case "English". Click on "Create".

Inside your workspace, you need create yours intents. Intents is identify according to the intention of the user target, for instance, if we were creating a "disk Pizza", one intention could be "Do a order" or "Ask a pizza", and for a instance we have give at least 5 phrases to Watson learned the standard, so a intention has a group of possibilities of user interact with your bot, which will have a response for this group. Let's click on "Create New".

In the column "Intent name", insert "whoami", the "#" the system include automatically, again this name is a classification for a group of possibilities that users normally use to interact when has this intention, ok? As per mentioned previously, include at least 5 possibilities, could be more, but the recommendation is about 10. Include the examples above, or as you prefer. Have in mind that is not necessary include all variations, as Watson work with taxonomy and understand the standard. Click on the first line, type the first

example, and type enter to jump the next, do the same until your reach the last one. Then click "done" button to conclude this intention.

Click on "Create new" to create the next intention as the following:

Don't forget to click on "Done" when you finished. Go to the next one.

Click on "Create new" and create the next one as the following:

Click "done" when you finished.

Click on "Create new" to create an intention to respond about what you do.

Click on "Done" and let's go to create the last one to respond about your hobby, so what do you like to do in your free time.

Click "Done" and let's go to entities. Click on "Entities" as showed in the screen above.

Now you are going to create entities. An entity represents a class of object or a data type that is relevant to a user's purpose. By recognizing the entities that are mentioned in the user's input, the Conversation service can choose the specific actions to take to fulfill an intent.

Click on "Create new" and follow the example below.

In this example you are creating an entity to be specific for responses about what you like to do in your free time, for instance: "Do you like play soccer?" on this case you intention and entities, but in case the user ask: "What do you like to do?", it's more generic, so your answer must be more generic as well. Attention: For this lab keep Fuzzy Matching "off".

Entity has a name and a group of possibilities, and for each possibility you can add synonyms, once Watson read the correct word to captured entity.

Type "sport" on field Entity (@ is included automatically by the system), then include in the list above the values above, as the listed above, and click "Done".

That is it for entities. Now let's create our dialog. Click on "Dialog" as shown above.

At this point you are prepared to complete your bot, creating a dialog flow, which will be based on intentions and entities you created. Click on "Create" and follow the next steps.

The system generate automatically 2 nodes, "Welcome" that is the first node executed by the service in the first requisition, such as "Hello, How can I help you?", and "Anything else", which is the last node verified condition, that means no one

the flow dialog no one of the node of this flow has attended the conditions. Let's include a node to if the intention to the user is greetings, in this case you will create a specific response for that.

Tip: Click I the border of a node to have the options to add more nodes in the "+" signal.

Click in the "+" signal below "Welcome" node.

Include in the first field the name for this node (it's not mandatory). In the field if, where you can validate a condition based on Intention, or Entity, or context variable, or a combination of them. In this case type "#", wait the system shows the list of intentions, so click on "greetings", Go to Responses and add the following response.

Click in the "x" signal on upside right to close this node, and click in "+" below of greetings node.

Name it as Goodbye, and include #goodbye in the condition, so go to the response and include the response, as the following.

Once again click on "+" above Goodbye node.

Include the node to respond to the #whatdoyou do intention, as shown above. And create another one for #whoami as the screenshot below:

Create another node for #hobby intention as the following, but this time keep the response empty, because you will use another technique to be specific, once you created entities for this intention.

Click on the signal "+" in the tight side of node "Hobby".

Name this node as Soccer, and add @sports:Soccer in the condition, and the response, which is specific for soccer. Feel free to change the response according to you. Now we go include other node below soccer (click on "+" signal below soccer and so on), to treat other entities sports as the following:
For Bike:

For Tennis:

For football:

In case the user do not mentioned no one of the entities above, we need to have a generic response for that, so you have to include a "anything_else" method, as the following:

Ok! You already have all the nodes you need, but you have to

inform to Watson to entry in the entities condition when the #hobby condition ne true. Go back to the #hobby node and click on icon "Jump to" (third one in the bottom of node), as shown below:

The system will show the following information in a green bar, that means it is waiting you indicate for where it have to jump. Click on "Soccer" node, and the system will show 2 options as the following:

click on "Go to condition" button. The screen will looks like as the following:

That's it! Now let's test it and learn more and more. Click on "..." bottom in the corner in the right side above. Talk to it!

Congratulations!! Now we can plug this service in any channel as you want, such as Facebook messenger, Telegram, slack, etc.

3) Plug your bot to a web page :

3.1 Go to GitHub page, case you do not have a account create one.
<https://www.github.com>

3.2 Create a app on Bluemix and clone a github source code. Back to Bluemix catalog and create "Continuous Delivery" service, as the following:

Click on "Continuous Delivery service" and go the next page.

Change the name as shown above and click on "Create" button.

Click on "Start here" over "Start from toolchain template"

Click on "Simple Cloud Foundry toolchain" service. Open a new browser tab and open <https://www.github.com>, and create an account if you do not have.

Fill out the fields and click on "Sign up for GitHub" and follow the steps to create your account. As soon as you have created your account go to the URL:
<https://www.github.com/sergiogama/chatbot> (Consider this one instead of /ibm-dbg-chat)
Click on "Fork" up right in the screen as the following:

Now you have a copy of the web front end for your chatbot, as the following:

Copy URL and Back tp bluemix browser tab.

Change the name of "Touchain Name" and paste the URL copied previously on "Source

repository URL" field, and click on "Create" Button. (Use /chatbot instead of /ibm-dbg-chat)

Click on "Eclipse Orion Web IDE". Open the folder tree in left side and open bot.js file, as the following:

Now let's change the code to insert your Watson Conversation credentials, in lines 26, 27 and 32, in the right side. Back to browser tab of your conversation, and click on menu icon in up left side, as the following:

Click on "Deploy" option. In the next screen you have the information need as the following:

Copy the credentials and workspace_id and back to DevOps browser tab. Change the code as the following:

Now, open manifest.yml file in the left side pane, and change the host name as the following:

Tip: change to your name, but pay attention as this host name will be part of a public domain. In the example below will be <https://ibm-dbg-sergiogama.mybluemix.net>

Deploy your chatbot, just click on "Run" icon as shown above. Wait 1 to 3 minutes, until the bullet comes green again, as the following:

As developer click on the icon as shown above, cross the finger, and...

Workshops/FDPs/Seminars etc. conducted by the Department to the Faculty

Date	Event Name	Name of the Eminent Guest	No of Faculty participated
09.11.2018 to 16.11.2018	FDP on Problem Solving through C and Data Structures	Mr.J.Karthikeyan from Amphisoft	26
01.11.2018	Seminar on "Programming in Coding Snippets" by Oxford Publisher	Oxford Marketing Manager	25

Workshops/FDPs/Seminars etc. conducted by the Department

Date	Event Name	Name of the Eminent Guest	No. of Students participated
17.12.2018 - 22.12.2018	Google Android Developer Fundamentals Workshop by APSSDC	1.Mr.U.Lokesh 2.Ms.Sameemuneesa 3.Mr.Anisha	52
11.12.2018	1 day Workshop on Significance of Security Control and Blockchain Technology (Organized under CSI)	Dr.Ch.Rupa	64
08.12.2018 & 09.12.2018	2 day Workshop on Big Data Analytics	Dr.Pankaj Kumar Sharma & Mr.AswinPerti	80
03.12.2018	24hrs Citizen Hackathon competition	Miracle Team From Vizag	32
26.11.2018	1 day Workshop on "Cognitive Technologies" by Miracle	1.Varshini Thotakura 2.Lohita Tirunagari 3.Lakshman Kumar Korapati	64

Important Visitors to the Department

Name of Eminent Guest	Organization	Date(s) of Visit
Dr.R.Rajeswara Rao	Professor & HOD, Dept. of CSE, UCE Vizianagaram, JNTUK, Kakinada, Vizianagaram.	06.09.2018
Dr. A.S.N.Chakravarthy	Professor, Dept. of CSE, UCE Vizianagaram, JNTUK, Kakinada, Vizianagaram.	06.09.2018
Dr.G.Jaya Suma	Professor & HOD, Dept. of IT, UCE Vizianagaram, JNTUK, Kakinada, Vizianagaram	06.09.2018

Details of publications of faculty

Name of the Faculty	Publication Title	Publication Details
Dr.Vedula Venkateswara Rao	Prediction and Analysis of Sentiments on Twitter Data using Machine Learning Approach	International Journal of Computer Science and Information Security, Vol.No:16,no:18,August,2018
A.Leelavathi	Attainment of Course Outcomes by using Python Tool for Outcome Based Education	ICNTET,September 7th& 8th 2018,
Dr.Vedula Venkateswara Rao	Performance of Memory Virtualization Using Hybrid Migration of Virtual Machines	International Journal of Machine Learning and Computing, Vol no:8,no:5,October 2018
Dr.D.JayaKumari	Prognosticate Breast Cancer by Exerting Fuzzy Precognition Clustering Technique and Collate Technique	IJAER, Volume 13,number 22,2018 pp.15492-15502,NOV 2018
N.Praveen Kumar	Security attacks and challenges in wireless sensor networks	IJSRCSEIT, NOV 2018,Volume 6,Issue 4 ISSN: 2456- 3307
Dr.D.JayaKumari	Big Data to Big Impact on Business Intelligence and Analytics	International Journal of Research and Analytical Reviews, E-ISSN 2348-1269, P- ISSN 2349-5138, December 2018, Volume 5, Issue 04.

NPTEL Certified Faculty List (June-Oct-2018 Session):

Name of the Faculty	Course	Certificate Type
Pusuluru HariChandana	Design and Analysis of Algorithms	Successfully completed
N.Praveen Kumar	Design and Analysis of Algorithms	Successfully completed
Ananda Babu Ijjaparapu	Introduction to Machine Learning	Elite
Devakivada Ganesh		Elite
Kiran Kumar Bonthu		Successfully completed
Venkanna Babu Alamuru		Elite
Shirin Bhanu Koduri		Elite
Loshma Guniseti		Elite
Vamsi Krishna Madduri		Successfully completed
Hanuman Turaga	Database Management Systems	Elite
B.Sri Ramya	Introduction to Programming in C	Elite
N.Hiranmayee		Successfully completed
Loshma Guniseti	Introduction to R Software	Elite+gold
K. Lakshmi Narayana	Problem solving through Programming in C	Elite

R&D activities/initiatives taken-up

As part of **MOU** with Bennet-University the ATOM Research Group conducted the **2- day Workshop on Big Data Analytics**, from 08.12.2018 to 09.12.2018 for III CSE students.

Research center inspection was conducted on 06.09.2018

Applied AICTE-ISTE Refresher Programme Deep Learning Applications using PYTHON on 05.11.2018
Applied RPS Scheme on 14.11.2018

Applied AICTE-MODROBS on 15.12.2018

Fresher's Party Conducted on 08.09.2018

Fresher's Party is grandly organised by our CSE Department. All the academic toppers are awarded with cash prizes and certificates by college management.

Engineers Day conducted on 15.09.2018

The following are the list of winners of Engineers day-2k18

Engineers Day-2K18 WINNERS LIST			
S.No.	Event Name	First	Second
1	Technical Quiz	G.B.S.Y. Vasudeva Rao 17A81A0516, II-A T. Sumanth 17A81A0546, II-A	Ch. Ganesh, IV-C 15A81A05D0, Batch-5 S.Karthik, IV-C 15A81A05G8 Batch-5.
2	Black & White	S.Vinay 15A81A05B3, IV-B	S.Rithvik 17A81A05L0, II-D
3	Debugging	M.Jayanth 15A81A0586, IV-B	V.Ramalakshmi 15A81A0550, IV-A
4	Tech-Talks	G.V.L.Tulasi 17A81A0513, II-A	M.Vyshnavi 15A81A0528, IV-A
5	LOGO Design	S.Karthik 15A81A05G8, IV-C	M.Vyshnavi 15A81A0528, IV-A
6	Chat-Bot	V.LakshmiNarayana 17A81A0554, II-A	K.SaiJeshitha 15A81A0578, IV-B
7	Treasure Hunt	S.Supriya 15A81A0541, IV-A N.Sunilkumar 16A81A05A9, III-B J.Pragathi Sree 17A81A0515, II-D	

Student Achievements

Name of the Student	Regd. No	Name of the Industry
Amiseti N V Vamsi Krishna	17A81A0501	Internship was conducted on Amazon Web Services at innData Analytics Pvt.Ltd,Visakhapatnam

Sahaya Activites

As part of Sahaya we donated the following list of events are conducted

Date	Service Activity Details	Venue
23/08/2018	Donated Rs. 8000/- worth of food items, medicines distributed to Kerala fluid victims along with old cloths.	Kerala
28/04/2018	Donated Rs. 2000/- worth of food distributed to orphans at Faith and Deed orphanage home at Unguturu.	Faith and Deed orphanage home at Unguturu.
13-12-2018	Donated Rs. 22000/- to Mr. Ameer and Mr. Ashif who are met with electrical fire accident at Rajahmundry.	Sri Vasavi Engg. College, TPG

Voluntary Blood Donation Camp at Sri Vasavi Engineering College, Tadepalligudem

Fun Corner

1. What can clap without any hands?
2. What can go up and come down without moving?
3. When the water comes down, I go up. What am I?
4. What kind of dog that never bites?
5. What has a cap but has no head?
6. What has no weight but is heavy enough to sink a ship?
7. If a man carried my burden, he would break his back. I am not rich, but I leave silver in my track. Who am I?
8. I never ask questions, but always answered. What am I?
9. U can break me easily without even touching me or seeing me. What am I?
10. The more you take, the more you leave behind. What am I?

Do You Know?

- There are only two words in the English language that have all five vowels in order: "abstemious"= moderate and "facetious"= treating serious issues with deliberately inappropriate humour.
- The name of all the continents end with the same letter that they start with.
Example: Asia, Africa, Europe etc..
- The "sixth sick sheik's sixth sheep's sick" is said to be the toughest tongue twister in the English language.
- Cockroaches were there 120 million years before dinosaurs roamed the earth.
- Russia has a larger surface area than Pluto.

Fun Corner Answers

1. A Thunder, 2. Temperature, 3. An Umbrella, 4. A Hotdog, 5. A Bottle, 6. A Hole, 7. A Snail, 8. A Doorbell, 9. A Promise, 10. Footsteps.

The background of the entire image is a futuristic, digital-themed scene. It features a hand holding a glowing, translucent Earth globe. The hand is positioned at the bottom, with fingers spread, supporting the globe from below. The globe is illuminated from within, showing a bright yellow and orange core, and its surface is semi-transparent, revealing the continents and oceans. The background is a dark blue space filled with various digital elements: floating windows, charts, graphs, and data visualizations. Some windows show line graphs, others show bar charts, and there are also circular icons and abstract patterns. The overall aesthetic is high-tech and data-driven.
